PROFESSIONAL SUMMARY

Fullstack Developer with 4+ years building production web, mobile, and backend systems across EdTech, fintech, e-commerce, and manufacturing domains. Currently architecting Nlite, an ongoing AI-driven children's cognitive-assessment platform (React Native, Vue 3, Node.js/Hapi.js, Google Gemini, Sarvam AI), alongside overseeing, as Senior Developer, a full-stack Learning Management System (React/TypeScript, Node.js/Express, PostgreSQL) with AI-graded assessments, sandboxed code execution, and face-recognition attendance — built with AI-assisted development practices. Also delivered legacy ERP modernization (including database migration, BI reporting, and an LLM RAG prototype), multi-platform e-commerce, and enterprise website engineering.

TECHNICAL SKILLS

Backend: Node.js, Express, Hapi.js, PHP, CodeIgniter, TypeScript, REST API design, microservices architecture, Sequelize (PostgreSQL), Mongoose (MongoDB), MySQL/MySQLi, raw pg, Joi/Zod validation, JWT/OTP auth, Helmet, express-rate-limit, Puppeteer/PDFKit/dompdf server-side rendering, Bull/Redis job queues, node-cron

Frontend: Vue 3, Vite, Pinia, PrimeVue, Next.js, React 18, TypeScript, React Router, TanStack Query, Radix UI, Tailwind CSS, React Hook Form, Zod, Monaco Editor, Bootstrap/AdminLTE, Chart.js, Recharts, Axios

Mobile: React Native, Redux Toolkit, React Navigation, native camera/audio modules, offline-first sync, voice-enabled search

AI / LLM: Google Gemini API, Groq SDK (LLM grading), prompt engineering, structured JSON-schema outputs, content-safety/tone guardrails, Sarvam AI speech-to-text, AWS Textract OCR, Claude Code (AI-agent-driven development), LLM RAG pipelines (FAISS, vector databases), Python (working knowledge)

Cloud / DevOps: AWS (S3, EC2, Textract), Docker, Docker Compose, GitHub Actions CI/CD, k6 load/stress/soak testing, Shell scripting (cron jobs)

Databases: PostgreSQL, MongoDB, MySQL, MS SQL Server, Redis, FAISS (vector DB)

Data / BI: Power BI, MS SQL Server → MySQL data migration

Design Tools: Figma, UX Pilot

Process & Documentation: Requirement gathering & estimation, SOWs, deployment checklists, incident reports

Integrations: Razorpay, NMI, Shiprocket, DTDC, Google Auth, Firebase, PHPMailer, Appointy, Wati (WhatsApp Business API), WhatsApp Business Cloud API, Gmail, Gravity Forms, Google Apps Script, MSG91 (SMS), Judge0 (code execution), face-api.js, AWS S3

EXPERIENCE

Fullstack Developer (Fullstack AI Developer) — Vtricks / Invictosoft Technologies Aug 2022 – Present

Nlite — Children's Cognitive-Assessment EdTech Platform May 2026 – Present

- Architected and shipped a multi-service platform end-to-end: React Native mobile app, two Vue 3 admin dashboards, and a Node.js/Hapi.js microservices backend with dual PostgreSQL/MongoDB persistence.
- Built production LLM pipelines (Google Gemini, Sarvam AI) for automated report generation, handwriting/essay grading (AWS Textract OCR + Gemini rubric scoring), and speech-based scoring (hybrid LCS-diff + Gemini semantic reconciliation).
- Designed a report-narrative engine with structured JSON-schema outputs, versioned prompt engineering, and a deterministic tone/safety validator ensuring PII-safe, growth-oriented language in every AI-generated report, with automatic template fallback on model failure.
- Built a scoring microservice for 20+ real-time cognitive games, including an AES-256-encrypted, mathjs-based dynamic scoring-formula interpreter and async Bull/Redis processing.
- Set up Docker-based CI/CD (GitHub Actions) with path-filtered selective microservice deployment to AWS EC2, and authored k6 load/stress/soak test suites.
- Integrated the Wati WhatsApp Business API to send the CBCL (Child Behavior Checklist) assessment to parents.

Vtricks LMS — Full-Stack Learning Management System

May 2026 – Present

- Overseeing as Senior Developer the build of a full-stack LMS (React 18/TypeScript, Vite, Node.js/Express/TypeScript, PostgreSQL/Sequelize) serving Admin, Trainer, and Student portals — developed with AI-assisted development practices across the team.
- Implemented JWT + refresh-token auth with Google/GitHub OAuth and MSG91 OTP login, backed by a granular custom role/permission system.
- Designed a coding-assessment engine integrating Judge0 for sandboxed multi-language code execution (Python, JS, Java, C++ + C) with an in-browser Monaco Editor, and Groq LLM-based AI grading for assignments and assessments.
- Built a face-recognition attendance system (face-api.js on the client) tied to session-based attendance tracking, and a GitHub OAuth/webhook-driven internship evaluation pipeline with automated commit polling and grading.
- Built fee/invoicing workflows (UPI payment proof verification, PDFKit invoice generation) and a placements module with AI-powered mock interview sessions (Groq + face-api).
- Integrated WhatsApp Business Cloud API and Nodemailer/SMTP notifications, with node-cron scheduled analytics rollups, commit polling, and log cleanup.

The Manaha — Healthcare Practice Website & Custom CMS

Jul 2026

- Delivered a responsive, SEO-optimized multi-page site and a custom PHP admin CMS (session-based auth with bcrypt, JSON flat-file data layer, full CRUD for blog/events) with secure image uploads and automated email notifications — reducing infrastructure overhead for a low-traffic client site.

Consulting Placement — Samiteon (via Vtricks / Invictosoft Technologies)

Oct 2025 – Dec 2025

- Kelvin Dynamics: Delivered a full WordPress site build via theme customization for a cold-therapy consumer health brand, covering content, design, and theme setup end-to-end.
- NewtekOne / Newtek Bank: Built treasury pages and led complete website maintenance for a NASDAQ-listed financial services company on a large-scale WordPress platform.
- Puffins: Built a proof-of-concept e-commerce site on WordPress/WooCommerce with NMI payment gateway integration.

Kardify — Automotive E-Commerce Platform

Aug 2024

- Architected and shipped a 4-app e-commerce system (Hapi.js/MySQL API, Next.js storefront, Next.js admin, React Native app) for automotive parts and alloy wheels, including vehicle-fit product discovery, Razorpay payments, Shiprocket/DTDC logistics, and voice-enabled product search in the mobile app.
- Deployed and managed the entire stack on AWS EC2 as a unified infrastructure — the Hapi.js/MySQL API, both Next.js applications (storefront and admin panel), and the backend serving the React Native app all run on EC2 instances, consolidating four client-facing surfaces onto a single, self-managed hosting environment.

Vtricks Technologies Website (vtricks.in)

Aug 2023

- Built the company's marketing site end-to-end on a custom PHP CMS, covering course/module pages, blog, corporate training, and lead-capture forms.

Prakalpa PMIS — Production Management Information System

Aug 2022

- Engineered and maintained a full-stack manufacturing management platform (CodeIgniter/PHP, MySQL, jQuery/AdminLTE) spanning 10 modules — BOM, inventory/stores, GRN, dispatch, project scheduling, vendor/procurement, design workflows, and role-based admin — across ~90 controllers, 80+ models, and 240+ views.
- Built end-to-end BOM workflows with bulk import/export (PhpSpreadsheet/PHPExcel), PDF generation (dompdf) for dispatch challans, and CSV/Excel data pipelines for production planning.
- Used Claude Code as an AI pair-programming partner to refactor legacy/duplicated modules, triage bugs across a large legacy codebase, and generate documentation — accelerating iteration on a codebase with no existing test suite or CI.
- Led a data migration from MS SQL Server to MySQL for one client deployment, and integrated a Power BI dashboard for production/business reporting.
- Built a working prototype of a document Q&A chatbot using LLM-based RAG (retrieval-augmented generation) with FAISS vector search over text documents (not yet in production).

EDUCATION

Bachelor of Engineering (BE) — Visvesvaraya Technological University, 2018
